

SAP Analytics Cloud Planning for CPG Company Digital Supply Chain Win Announcement

Leading CPG company selects SAP Analytics Cloud and SimpleFi labor planning content for their production labor planning needs

SAP Analytics Cloud Planning integrated with SAP Success Factors and IBP

- Headquartered: Quebec, Canada
- Industry: CPG
- Revenue: \$4B
- Workers: 10,000+

Background

A leading CPG company came to SimpleFi looking for help with a first potential SAP Analytics Cloud use case. Their HR business was looking for a solution to plan labour capacity, hours, shifts, etc at their 80 production units without mailing and linking files back and forth within Excel. They asked SimpleFi to help prove out SAP Analytics Cloud could meet requirements leveraging SimpleFi business content.

Solution Value

- Respond more quickly to staffing requirements and shortfalls
- More scalable to support growth
- Focus on plan inputs and not collecting and aggregating data
- One central version of the truth; no arguing over excel file versions

SimpleFi Prepackaged Solutions

- Labor Production Planning

Challenges

The client team really wanted to see the solution proven to meet their requirements. We conducted a fit to standard analysis and without performing a full proof of concept, modified our content to ensure the client HR team could see what the end state would look like for them.

Proof of concept

Working with global HR and IT, SimpleFi was able to prove SAP Analytics Cloud and SimpleFi's labor planning solution could meet client labor planning requirements with low configuration.

Deal Participants

SimpleFi Client Partner: Eric Blondin
SimpleFi Account Executive: Mehdi El-Omri
SimpleFi Sales Lead: Jon Essig
