

Win Announcement: Power BI Replace; Planning Blueprint and Financial Reporting

Orbia selects SimpleFi for FP&A advisory and to implement SAP Analytics Cloud for Financial Reporting and Planning

Industry: Business services
Revenue: \$8B
Location: Mexico, U.S.
Workers: 10,000+

Background

Orbia was introduced to SimpleFi when seeking assistance to evaluate SAP Analytics Cloud for financial reporting. They had initially started an analytics project with another partner that left them challenged on whether SAC could be the right solution going forward for reporting, analytics and planning. SimpleFi provided the confidence to Orbia that SAC can be an enterprise wide solution as they begin to embark on a full Finance Transformation (S4/CFIN + SAC). The SAC financial reporting project also proved that Power BI, their current platform for financial reporting, could be eliminated.

SimpleFi Phase I Project scope

- Financial reporting and analysis
- Financial dashboards
- Financial transformation advisory services

Up Next: Global Planning Blueprint, Management Reporting

Solution Value to Orbia

- Trusted Finance and SAP Analytics Cloud expertise
- Eliminate Power BI Financial reporting
- Direct connection to BPC without outside data lakes
- Changing model approach from Live to Import models eliminated 15+ models and allowed for enhanced functionality for use of dimension filters and commentary
