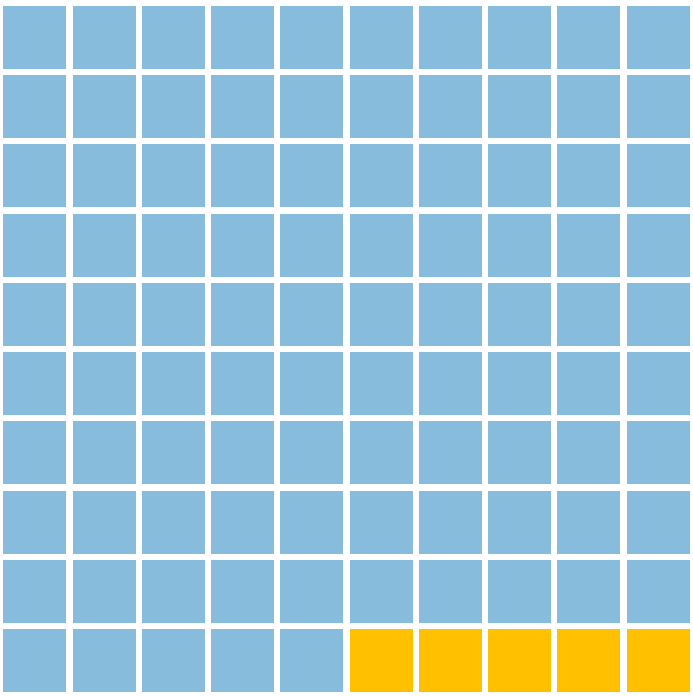
MIT LOOKED AT 300 ENTERPRISE AI DEPLOYMENTS

95 in 100 produce nothing you can measure.



- 95 in 100 stall, with little or no measurable impact on the P&L.
- Roughly 5 in 100 achieve rapid revenue acceleration.

MIT Project NANDA, The GenAI Divide, 2025

It is not the model. It is the wiring.

The tools never learned the work, and the organization never learned the tools. Before AI shows up in a number your board would accept, it has to land in four places. Most partners touch one of them.

01
ENABLE
your people

02
EMBED
your process

03
AUTOMATE
your close and plan

04
ACCELERATE
your project

THE FOUNDATION UNDER ALL FOUR

SAP Business Data Cloud

Governed data that carries its business meaning with it, so an answer can be defended rather than just believed.

A sequence, not a menu. Value shows up when all four have moved.

What each one is, and what you get → over

What each one actually is and what you get

01 ENABLE your people

Your team learns to work with AI, starting from their own pain. Delivered with AttestiFi, our partner.

AttestiFi

WHAT YOU GET

An eight-week cohort of eight to ten people. Ninety minutes a week, one to one, on their own real work. Three to five hardened use cases per person, documented well enough to survive the person who built them, and a written attestation you can put in front of a board.

02 EMBED your process

Intelligence inside the plan and the close, on a governed SAP data foundation rather than beside it. SAP awarded us Expert tier in its Business Data Cloud competency.

SAP Business AI

WHAT YOU GET

SAP Business AI delivered on a governed data foundation, with what is live today kept strictly separate from what is still on SAP's roadmap. The honesty is the point: it is what makes the rest of the plan credible.

03 AUTOMATE your close and plan

PlaniFi AI Agents running on the live SAC data model, versioned and auditable like any human action.

PlaniFi AI AGENT
AI powered by SimpleFi

WHAT YOU GET

Agents that run real process against your live SAC model, not a chatbot beside it. Budget entry in plain language, validated against the model and written back through real APIs. Month-end close and admin, forecast, analyze and monitor, and predictive supply and demand.

04 ACCELERATE your project

The industry-standard application rolled out by PlaniFi Project Worker Bee, then made to fit what your business actually needs.

WHAT YOU GET

The industry-standard application rolled out by AI, then adjusted to fit what your business actually does. The same approach covers system migration (BW, BPC, other) and model provisioning. We built it for ourselves first.

Start where the pain is loudest

Tell us which quarter-end hurts and we will start there. Most engagements begin with enablement, because it is the pillar with no vendor and no backlog ticket.
